### **DETAILED ACTION**

Page 2

# Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-6 are provisionally rejected on the ground of nonstatutory double patenting over claims 28, and 36-40 of copending Application No. 10/556495. This is a provisional double patenting rejection since the conflicting claims have not yet been patented.

The subject matter claimed in the instant application is fully disclosed in the referenced copending application and would be covered by any patent granted on that copending application since the referenced copending application and the instant application are claiming common subject matter, as follows: for claim 1, '495 teaches a rotationally driven main shaft 55 having a shaft journal 54 whose axis B forms an acute angle w with the axis AA of the main shaft, and a drilling head 46 that is mounted so it

Page 3

can rotate about axis B, and has a circumferential region 61 that runs on a complementary/ opposing circumferential region 62, where the complementary circumferential region can be set rotating, in claim 28, for claim 2, the circumferential region has an external tooth system and the complementary circumferential region has an internal tooth system in claim 36; for claim 3, the circumferential region is formed by a hollow wheel/ gear 64 concentric to the axis AA in claim 37; for claim 4, the complementary circumferential region can be set rotating by a planet/epicyclic gear 71 engaged with the main shaft in claim 38; for claim 5, the complementary circumferential region can be set rotating by a independent/ separate drive in claim 39; for claim 6, the separate drive can be controlled or regulated in claim 40.

Furthermore, there is no apparent reason why applicant would be prevented from presenting claims corresponding to those of the instant application in the other copending application. See In re Schneller, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

# Claim Objections

Claims 1, 11, 14, and 17 are objected to because of the following informalities: the recitation of "it" and "its" should be positively recited. Appropriate correction is required.

# Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 3672

Claims 11 and 14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is unclear as to whether or not the elements of claim 1 are required in claims 11 and 14, since the term "in particular" is used to describe the drill head in reference to claim 1.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States

Claims 17, 18, and 21 are rejected under 35 U.S.C. 102(b) as being anticipated by Mohrmann, DE4332113.

Mohrmann teaches a borehole drill, having a rotationally driven drill head 1 that carries out a wobbling movement (abstract) in addition to rotation, having a conveying line 14 that leads into a drill head space that the drill head exists in, such that wobbling movement of the drill head will cause the cuttings to be transported to the conveying line; the drill head has a continuation that is the arms of 1a that penetrate the receiving end of the conveying line; the receiving end being at least partially annular in shape.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 19 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mohrmann, in view of Akesaka, US4692062.

Mohrmann teaches the invention substantially as claimed, but does not teach breaking ribs provided adjacent the receiving end, for reducing the size of large pieces of drilled material. Akesaka teaches that it is well known in the art to use breaker ribs 17 for tunneling machines at the entrance of conveyor lines 34. It would have been obvious to a person having ordinary skill in the art to modify Mohrmann in view of Akesaka to use breaker ribs to reduce the size of cuttings before they are fed into the conveyor line, for purposes of reducing clogging of the conveyor line.

## Allowable Subject Matter

Claims 7-10are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 11 and 14 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

Claims 12, 13, 15, and 16 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

### Response to Arguments

Applicant's arguments, see remarks, filed 12/1/2008, with respect to the rejection(s) of claim(s) 17-21 under 35 USC 102 and 103 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Mohrmann.

### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to CATHLEEN R. HUTCHINS whose telephone number is (571)270-3651. The examiner can normally be reached on Mon thru Thurs 7:30-5, alternate Fri 7:30-4 EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David J. Bagnell can be reached on 571-272-6999. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
